ABSTRACT

Background: Osteoporosis is a major public health problem, associated with substantial morbidity and socio-economic burden. An early detection can help in reducing the fracture rates and overall socio-economic burden in such patients. The present study was carried out to screen the bone status (osteopenia and osteoporosis) above the age of 25 years in urban women population in this region.

Methods: A hospital based study was carried out in 316 women by calculating T-scores utilizing calcaneal QUS as diagnostic tool.

Results: The result suggested that a substantial female population had osteopenia and osteoporosis after the age of 45 years. The incidence of osteoporosis was (20.25%) and osteopenia (36.79%) with maximum number of both osteoporosis and osteopenic women recorded in the age group of (55-64 years). After the age of 65 years, there was an almost 100% incidence of either osteopenia or osteoporosis, indicating that it increases with age and in postmenopausal period, thereby suggesting lack of estrogenic activity might be responsible for this increasing trend. Religion, caste and diet had an influence on the outcome of osteopenic and osteoporosis score in present study, but still it has to be substantiated by conducting larger randomized clinical trials in future.

Conclusions: A substantial female population was screened for osteoporosis and osteopenia using calcaneal QUS method utilizing same WHO T score criteria that otherwise shall remain undiagnosed and face the complications and menace of osteoporosis.

Keywords: Osteopenia, Osteoporosis, Calcaneal QUS (quantitative ultrasound), BMD (bone mineral density)

INTRODUCTION

Osteoporosis is a disease characterized by reduction in the bone mass and disruption of bone architecture leading to impaired skeletal strength and an increased susceptibility of fractures.¹ It is a major public health problem associated with substantial morbidity and socio-economic burden world wide.² Moreover, the proportion of elderly population is rapidly increasing in the developed as well as the developing world, which increases concern among aging population and public

health workers regarding disability, dependence, associated economic and social problems that are caused by osteoporosis. Osteoporosis does not have a dramatic clinical presentation except when fractures result. As age advances, the incidence of osteopenia and osteoporosis, the silent disease increases.³

Measuring the bone density remains the only important tool in the early diagnosis of osteoporosis, so that effective preventive and therapeutic measures can be initiated at the earliest. The gold standard for measuring

bone density however is the Dual energy X-ray absorptiometry (DEXA), useful tool for both the axial and appendicular skeleton as the detection rate of osteopenia and osteoporosis is higher with it in comparison to calcaneal quantitative ultrasound (QUS) method.⁴ But the commonest used modality of measuring bone density still remains to be calcaneal QUS.⁵ It has gained the importance in the situation where tool like DEXA are not available. Since, calcaneal QUS is cost effective,⁶ lacks deleterious effect of radiation and is portable.⁷ Thus, it can be useful for an early diagnosis of osteoporosis so that intervention can be done at the earliest to such patients.

Although, similar studies evaluating bone status in women from outside India and within India are present in the literature.⁸⁻¹³ but still the data is scanty, particularly from this region. Hence, the present pilot study was planned to screen bone status of healthy urban women above age of 25 years (when peak bone mass is formed) from this region utilizing calcaneal QUS (Hologic Sahara 0058 USG) as a diagnostic tool.

METHODS

The present prospective, cross sectional hospital based study included healthy women attending Malla Reddy Hospital (MRH)/Malla Reddy Institute of Medical Sciences (MRIMS) and Shadan institute of medical Sciences coming from different parts of Hyderabad city over a period of 6 months from 01-10-2014 to 31-03-2015. Total 316 women were enrolled and were distributed in the following age groups, 25-34 years (n=36), 35-44 years (n=76), 45-54 years (n=88), 55-64 years (n=84) and above 65 years (n=32). Informed consent was taken from all the subjects who participated in the present study.

Systemic diseases like renal and hepatic disorders rheumatoid arthritis, endocrine disorders like thyrotoxicosis, hyperpara- thyrodioid, Addison's disease, Cushing syndrome and prolonged immobilization and women with oophorectomy were excluded from the study. Women on long term medication affecting the bone turnover (steroids, heparin, warfarin, thyroxine, hydrocortisone, phenytoin sodium, hormone replacement) were also strictly excluded. The exclusion was based on the clinical examination and if required specific investigations were carried. The questionnaire included information on socio demographic, obstetrics, menstrual and medical history. The bone mineral density was measured at the calcaneus by QUS and T-scores were calculated based on WHO criteria¹⁴.

Although, the use of the WHO T-score thresholds of -2.5 for osteoporosis and -1.0 for osteopenia may be inappropriate at skeletal sites other than the spine, hip and forearm or when other modalities, such as quantitative ultrasound (QUS) are used.^{15,16} QUS yields a lower

incidence or prevalence of osteoporosis if this WHO T score is applied. Although studies are present,¹⁶ suggesting alternate equivalent T score with calcaneal QUS method, but there is lack of any clear strategies or appropriate equivalent T score thresholds, hence QUS screening using same diagnostic criteria can at least confirm or rule out osteoporosis¹⁵. Moreover few studies have used same T score method for diagnosis of osteoporosis in past.¹⁵

T-score (Ratio between patients BMD and that of young adult population of same sex and ethnicity). T-score of >-1 was taken as normal, between -1 to -2.5 osteopenic and <-2.5 as osteoporotic. T-score was also utilized to find out the incidence and age wise trend of osteopenia and osteoporosis in present study. Z-score is the number of standard deviations the measurement is above or below the age matched mean bone mineral density. Z-score is less commonly used but may be helpful in identifying persons who should undergo a work-up for secondary causes of osteoporosis. The present study was planned to evaluate bone status of urban women above age of 25 years excluding secondary osteoporosis. Hence, Z score was not evaluated

Statistical analysis was performed with the help of computer software Epi-Info 6.2. The statistical significance among categories variables was assessed by the use of chi-square test for trend. *P* value of < 0.05 was considered statistically significant.

RESULTS

In the present study, 316 women in between the age group of 25 to above 65 years were enrolled. The women included in the study belonged to middle income group strata with both housewives and working class. Among 316 total women maximum number were enrolled in the age group of (45-54) followed by (55-64) and (35-44) age group.

136 (43.03%) of women were normal as per WHO criteria T score, whereas 116 (36.79%) had osteopenia and 64 (20.25%) had osteoporosis. The mean \pm SEM, T-score at the calcaneum by QUS in the present study was -1.43 ± 0.56 . Among total osteopenic woman, maximum number of osteopenics were recorded in the age group of (55-64 years) followed by 45-54 years and 35-44 years as 39.65%, 24.13%, 15.51% respectively. Whereas, among total (64) osteoporotic women, maximum were recorded in the age group at 55-64 year followed by above 65 year and then of 35-44 age group as 25% each. No women was found osteoporotic in the age group of (25-34) (Table 1). While studying the age wise trend, it followed age wise increasing trend uniformly. After the age of 65 years, there was an almost 100% incidence of either osteopenia or osteoporosis with 50% being osteopenic and 50%, osteoporotic (Table 2). Total incidence of osteopenia and osteoporosis increased significantly after age group of 55-64 years.

Table 1: Age wise distribution of osteopenic and osteoporotic women.

Age (years)	Number n (%)	Normal n (%)	Osteopenic n (%)	Osteoporotic n (%)
25-34	36 (11.39)	28 (20.58)	8 (6.8)	0(0)
35-44	76 (24.05)	44 (32.35)	18 (15.51)	14 (21.87)
45-54	88 (27.84)	44 (32.35)	28 (24.13)	16 (25)
55-64	84 (26.58)	20 (14.70)	46 (39.65)	18 (28.12)
>65	32 (10.12)	0 (0)	16 (13.94)	16 (25)
Total	316	136 (43.03)	116 (36.79)	64 (20.35)

Chi-square for trend 16.889, $p = 0.00004$ (Highly significant)

Table 2: Age wise trend.

Age	Number n (%)	Normal n (%)	Osteopenia n (%)	Osteoporosis n (%)	Total Osteopenia+ Osteoporosis n (%)
25-34	36	28(77.77)	8(22.22)	0 (0)	8(22.22)
35-44	76	44(57.89)	18(23.68)	14(18.42)	32(42.99)
45-54	88	44(50)	28(31.81)	16(18.18)	44(49.99)
55-64	84	20(23.80)	46(54.76)	18(21.42)	64(76.18)
>65	32	0 (0)	16(50)	16(50)	32(100)

Chi-square for trend 25.93, $p = 0.0000$ (Highly significant). For the purpose of analysis >65 age category was clubbed with 55-64 age group

Figure 1: Age wise trend.

While studying the correlation between osteopenia/osteoporosis and other variables, it was revealed that among total 116 osteopenics and 64 osteoporotic, 68.96% and 87.50% were Hindus respectively and among hindus 90% and 92.4% osteopenic and osteoporotic were from upper caste. Of 116 total osteopenic women 8 (6.89%) were still menstruating, 12(10.34%) just achieved menopause and 76 (65.5%) were in post-menopausal period. Whereas, of 64 osteoporotic 4 (6.25%) were still

menstruating, 16 (25%) achieved menopause and 44 (68.75) were in post menopausal period. 38 (65.2%) of the osteopenic women and 40 (62.5%) of the osteoporotic women were vegetarian. Where as 20 (17.24%) and 12 (18.76%) of the osteopenic and osteoporotic women were non-vegetarian and rest were on mixed diet. Among the recorded osteopenic and osteoporotic women in the present study 65.2% and 62.5% were living active life respectively and two percent of these women gave history of tobacco/smoking and 90% of such women gave history of consuming tea and coffee regularly Table 3.

Table 3: Demographic variables.

Total	Osteopenic (n=116)	Osteoporotic (n=64)
Religion	n (%)	N (%)
Hindu	80(68.96)	56(87.50)
Muslim	22(18.96)	4(6.25)
Christian	12(10.34)	2(3.12)
Sikh	2(1.72)	2(3.12)
Chi-square (1) for trend 3.84, P=0.05(significant). For the purpose of analysis only two categories (Hindu's & Non-Hindu's)were analysed		
Caste among Hindu's		
Backward	56(70)	40(71.42)

Chi-square non significant		

DISCUSSION

The incidence of osteoporosis in the present study was (20.25%) and osteopenia (36.79%) with maximum number of both osteoporotics and osteopenic recorded in age group of (55-64 years). Hundred percent of population above 65 was either osteopenic or osteoporotic. The variations from

the present study in incidence of osteoporosis and osteopenia by both calcaneal QUS and DEXA methods have been shown in Table 4.

Table 4: Incidence of osteoporosis & osteopenia study.

Study	Osteoporosis	Osteopenia	Age
Present study	QUS 20.25%	36.79%	25 to > 65 years
Outside India			
Sallin <i>et al</i> ⁽⁸⁾	DEXA 92%	8%	58-95 years
Sadat-Ali <i>et al</i> ⁽⁹⁾	DEXA 46.7%	30.5%	Average age 57.62 years
Deplas <i>et al</i> ⁽¹⁰⁾	DEXA 86%	-	Mean age 80.6+/- 7.1 years
Indian study			
Pande, 2002 ⁽¹¹⁾	Digital X-ray radiogrammetry 50%	-	Above age 50 years
Shatrugna <i>et al</i> ⁽¹²⁾	DEXA Prevalence 29%	-	30-60 years

Identifying women with osteoporosis remains a clinical challenge. Although the results of present study in comparison to the various studies^{8,9,10,11,12} clearly reflect the under diagnosis of osteoporosis by QUS in comparison to DEXA, but QUS still remain the commonest modality of measuring bone density of cancellous bone (peripheral bone measurement) in the heel, with advantage of low cost, lack of radiation and portability. Hence, DEXA, remains the gold standard for measuring bone density but underscoring fairly good number of women to be osteopenic and osteoporotic in present study suggest that USG method can be use full particularly in situation where DEXA is not available, who other wise will remain totally undiagnosed. The incidence indicated in the present study may not be the true incidence of the population as QUS yield a lower incidence or prevalence of osteoporosis if the same WHO T score is applied.^{15,16} However, QUS screening conclusively confirms or rules out osteoporosis or osteopenia in any population.

Maximum number of osteopenic and osteoporotic were in post-menopausal period followed by who just achieved menopause. Hence, the current study suggests that age and duration of menopause have negative correlation with the bone mineral density, as incidence of osteopenic and osteoporotic women increases with age and in post-menopausal period. As age advances, the incidence of osteopenia and osteoporosis (the silent disease) increases with a resultant increase in the osteoporotic fractures.³ This might be because there is an increased imbalance between bone resorption and formation with aging, which is an important cause of osteoporosis in elderly.¹

Hindus upper cast were most affected population in our study but this aspect still has to be substantiated, as the

present study was not randomized. Vegetarian were more affected population although they varied non-significantly from other dietary patterns. This may be due to deficient diet in calcium or low nutrients status.^{12,18}

The present study has some limitations less number of patients were screened over a period of six months only. QUS method may be used for osteoporosis screening but confirmation of osteoporosis may be done on the basis of DEXA or bone resorption markers, which were not carried out in the present study due to non-availability of the facilities. Moreover Study has not considered stiffness index.

CONCLUSION

The present study suggests that calcaneal QUS method utilizing same WHO T score criteria is an attractive screening tool because of the low cost, feasibility and help in identifying osteopenia and osteoporosis in a substantial female population who otherwise shall remain undiagnosed and face the complications and menace of osteoporosis.

14. **Prevalence of intestinal metaplasia and dysplasia in infectious and non-infectious chronic gastritis**
Bashar Abdul-Jabbar Hassawi, Khesar Hussein Khalil, Zobyda Adnan Sharafadin

15. Molecular detection of HPV 16/18 E6 genes from cervical cells
 Idris Kabuga Auwal, Lawal Dahiru Rogo
 Int J Res Med Sci. 2015; 3(9): 2232-2236
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150608
16. Study of metopic suture in south Indian skulls
 Moulia P. Akbar Basha, Raju Sugavasi
 Int J Res Med Sci. 2015; 3(9): 2237-2239
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150609
17. The prevalence of probable migraine and sleep quality among women aged 20-49 living in a semi-rural area in western Turkey
 Egemen Unal, Resat Aydin, Mehmet Enes Goker, Alaeltin Unsal
 Int J Res Med Sci. 2015; 3(9): 2240-2245
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150610
18. Comparative study of marital adjustment and life satisfaction among spouses of patients with alcohol dependence and normal healthy control: a case control study
 Nazish Fatima, Risht Panday, Abid Rizvi
 Int J Res Med Sci. 2015; 3(9): 2246-2251
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150611
19. Application of Bethesda system for conventional cervical cytology: a study of 340 cases
 Lajli G. Vallya, Seema N. Baxi
 Int J Res Med Sci. 2015; 3(9): 2252-2258
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150612
20. Evaluation of hepatitis B vaccine responsiveness in hemodialysis and peritoneal dialysis patients
 Salama Elsayed Farag, Tarek A. Ghonemy, Sameh A. Soliman, Ahmed Bihery
 Int J Res Med Sci. 2015; 3(9): 2259-2263
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150613
21. A cross-sectional study on under-emphasized sex determining parameters of femur
 Kishan R. Siddapur, Geetha Kishan Siddapur
 Int J Res Med Sci. 2015; 3(9): 2264-2267
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150614
22. A study of aerobic bacterial pathogens associated with vaginitis in reproductive age group women (15-45 years) and their sensitivity pattern
 Sangeetha K. T., Saroj Golla, Vasudha C. L.
 Int J Res Med Sci. 2015; 3(9): 2268-2273
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150615
23. Evaluation of diastolic function in hypertensive using echocardiography
 Yamini Lavanya, Bajji Sharan Singh, Salla Srikanth, Koneeru Veer Raghava Choudary
 Int J Res Med Sci. 2015; 3(9): 2274-2279
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150616
24. Does non-steroidal anti-inflammatory drugs increase tumor necrosis factor-alpha levels?
 Eylem Çağlayan, Mustafa Kaplan, Selim Nabanlı, Vasam Kemal Akpak, Burak Sahar, Ibrahim Akmaz
 Int J Res Med Sci. 2015; 3(9): 2280-2283
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150617
25. Platelet indices- evaluation of their diagnostic role in pediatric thrombocytopenias (one year study)
 Mirza Asif Baig
 Int J Res Med Sci. 2015; 3(9): 2284-2289
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150618
26. Study evaluating chronic abdominal pain and functional abdominal pain syndrome
 Sangeeta Gupta, Gaurav Gupta, Prateek Sharda, Karan Mittal
 Int J Res Med Sci. 2015; 3(9): 2290-2298
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150619
27. A study to evaluate the knowledge of ASHA workers on antenatal and postnatal care in Bijapur district
 Shashank KJ, Mahabeshwar Mahantappa Angadi
 Int J Res Med Sci. 2015; 3(9): 2299-2302
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150620
28. In vitro study of Myristica fragrans seed (Nutmeg) ethanolic extract and quercetin compound as anti-inflammatory agent
 Kartika Dewi, Budi Widyanto, Pande Pulu Erwanjantari, Wahyu Widowati
 Int J Res Med Sci. 2015; 3(9): 2303-2310
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150621
29. Prevalence of hepatitis B virus and hepatitis C virus co-infection in human immunodeficiency virus positive patients: a study from tribal area of central India
 Prakash Khuntia, R. L. Khare, P. Beck, Sanjeev Kumar
 Int J Res Med Sci. 2015; 3(9): 2311-2315
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150622
30. Pattern of diastolic dysfunction in alcoholic and non-alcoholic cirrhotic portal hypertensive patients with or without ascites in rural population in South India
 Prashant S. Sidmal, Prashanthkumar BG, Shekarappa KC
 Int J Res Med Sci. 2015; 3(9): 2316-2322
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150623
31. Anomalous azygos veins - its embryological basis and clinical significance
 Uma Shivanal, Geethanjali HT
 Int J Res Med Sci. 2015; 3(9): 2323-2326
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150624
32. Correlation between serum ferritin and glycaemic control in patients of type 2 diabetes mellitus: a case control study
 Anilkumar Virji Maheshwari, Bharat K. Bhoi, Bhavesh R. Sadarhya, Hardik N. Javia, Jigar K. Gusani, Harshom Sharma
 Int J Res Med Sci. 2015; 3(9): 2327-2330
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150625
33. Health literacy - is it useful in prevention of behavioral risk factors of NCDs?
 Wm Myint Oo, Wm Khin Mya, Myo Moch Moh
 Int J Res Med Sci. 2015; 3(9): 2331-2336
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150626
34. A comparative study of efficacy and safety of flupirtine versus piroxicam in patients with low back pain
 Anubhav Sharma, Manjunath SM, Nagesh Raju G, Dharmaraj B, Nandendra Gowda MR
 Int J Res Med Sci. 2015; 3(9): 2337-2341
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150627
35. The effect of topical olive oil on prevention of bedsores in intensive care units patients
 Zahra Abbas Ali Madadi, Reza Zeigami, Jallil Azimian, Amir Javadi
 Int J Res Med Sci. 2015; 3(9): 2342-2347
 » Abstract » PDF Fulltext » doi: 10.18203/2320-6012.ijrms20150628
36. Alterations of antioxidant enzymes in preeclampsia
 Thankonda Sharmila Krishna, Epari Venkata Rao, Jupalle Nagalah Naidu
 Int J Res Med Sci. 2015; 3(9): 2348-2351

- » [Abstract](#) » [PDF Fulltext](#) » doi: [10.18203/2320-6012.ijrms20150629](https://doi.org/10.18203/2320-6012.ijrms20150629)
37. **Knowledge and awareness regarding hepatitis B infection among medical and dental students: a comparative cross sectional study**
Preetha Paul, Balaji Arumugam
Int J Res Med Sci. 2015; 3(9): 2352-2356
» [Abstract](#) » [PDF Fulltext](#) » doi: [10.18203/2320-6012.ijrms20150630](https://doi.org/10.18203/2320-6012.ijrms20150630)
38. **Effect of Yoga on pulmonary function tests**
Keshur A. Karmur, Hitesh A. Jani, Nileshwari H. Vala, Priti C. Bhandari
Int J Res Med Sci. 2015; 3(9): 2357-2361
» [Abstract](#) » [PDF Fulltext](#) » doi: [10.18203/2320-6012.ijrms20150631](https://doi.org/10.18203/2320-6012.ijrms20150631)
39. **Comparison between rapid urease test and carbon 14 urea breath test in the diagnosis of Helicobacter pylori infection**
Harmeet Sahni, Karishma Palshetkar, Tanveer Parvez Shaikh, Sharique Ansari, Mithilesh Ghosakar, Aditya Oak, Naseem Khan
Int J Res Med Sci. 2015; 3(9): 2362-2365
» [Abstract](#) » [PDF Fulltext](#) » doi: [10.18203/2320-6012.ijrms20150632](https://doi.org/10.18203/2320-6012.ijrms20150632)
40. **Surveillance data on micro-organisms in respiratory tract infections at a tertiary care teaching hospital in South India**
Sriram Shanmugam, Mohankumar Thekkinkattil, Manish Kanayalal, Minu Mohan C, Charmie Mohnot, Monisha K
Int J Res Med Sci. 2015; 3(9): 2366-2375
» [Abstract](#) » [PDF Fulltext](#) » doi: [10.18203/2320-6012.ijrms20150633](https://doi.org/10.18203/2320-6012.ijrms20150633)
41. **Economic burden of hypertension care on households of Malwani slum of Mumbai: a cross-sectional study**
Bharat S. Thakare, Ambadas Adhav, Suhas Kadam
Int J Res Med Sci. 2015; 3(9): 2376-2381
» [Abstract](#) » [PDF Fulltext](#) » doi: [10.18203/2320-6012.ijrms20150634](https://doi.org/10.18203/2320-6012.ijrms20150634)
42. **Correlation of Pap smear and visual inspection with acetic acid for screening of premalignant and malignant lesion of cervix**
Anshu Singh, Kalpana Singh, Nisha Rani Agarwal
Int J Res Med Sci. 2015; 3(9): 2382-2385
» [Abstract](#) » [PDF Fulltext](#) » doi: [10.18203/2320-6012.ijrms20150635](https://doi.org/10.18203/2320-6012.ijrms20150635)
43. **Role of fiberoptic bronchoscopy in haemoptysis: an analysis of 157 patients**
Naveed Nazir Shah, Manzoor Ahmad Wani, Syed Quibliya Khursheed, Rakesh Bargava, Zuber Ahmad, Khurshid Ahmad Dar, Arshad Altaf Bachh
Int J Res Med Sci. 2015; 3(9): 2386-2393
» [Abstract](#) » [PDF Fulltext](#) » doi: [10.18203/2320-6012.ijrms20150636](https://doi.org/10.18203/2320-6012.ijrms20150636)
44. **Evaluation of performance of various histological grading systems of soft tissue sarcomas and the prognosis (metastatic risk and survival rate)**
Mirza Asif Baig
Int J Res Med Sci. 2015; 3(9): 2394-2401
» [Abstract](#) » [PDF Fulltext](#) » doi: [10.18203/2320-6012.ijrms20150637](https://doi.org/10.18203/2320-6012.ijrms20150637)
45. **Outcome and management of antenatal patients with jaundice in tertiary care centre of eastern India: a retrospective study**
Kalpana Singh, Gopal Kumar, Anshu Singh, Anjali Rani
Int J Res Med Sci. 2015; 3(9): 2402-2404
» [Abstract](#) » [PDF Fulltext](#) » doi: [10.18203/2320-6012.ijrms20150638](https://doi.org/10.18203/2320-6012.ijrms20150638)
46. **Static and dynamic postural stability in subjects with and without chronic low back pain**
Heta Hareesh Thakkar, Senthil Kumar E
Int J Res Med Sci. 2015; 3(9): 2405-2409
» [Abstract](#) » [PDF Fulltext](#) » doi: [10.18203/2320-6012.ijrms20150639](https://doi.org/10.18203/2320-6012.ijrms20150639)
47. **Estimation of body mass index and risk evaluation of diabetes and cardiovascular diseases in undergraduate students**
Ravishankar Manchukonda, Anurag Srivastava
Int J Res Med Sci. 2015; 3(9): 2410-2418
